THE DAIRY

DAIRY NOTES.

Cows that give the richest milk are more apt to produce offspring that will do the same.

For his own good the farmer should be sure his herd, whether beef or dairy, is free from tuberculosis.

Immediately after separation the cream should be cooled to the temperature of the water direct from the well.

If in any milking a part of the milk is bloody or stringy or unnatural in appearance, the whole mess should be rejected.

Separators have become commonly known through the use of power machines at creameries and separating stations.

A cow that gives rich milk and is kept in good condition will produce a butter that does not need coloring matter, at all.

If after churning the butter is not firm try leaving it in the buttermilk a few hours. This often makes a wonderful change.

The breeder of Shorthorns to produce milkers must actually engage in dairying at least in so far as the handling of his cows are concerned.

The well bred special purpose dairy cow is supposed and expected to do a little better with the feed she consumes than the ordinary cow consuming the same ration.

Milk quietly, quickly, cleanly and thoroughly. Cows do not like unnecessary noise or delay. Commence milking at exactly the same hour every morning and evening, and milk the cows in the same order.

The dual-purpose cow will produce only about one dollar's worth of milk for one dollar's worth of feed. The successful dairyman must have the cow that is especially built for the production of milk; the cow that will produce two dollar's worth of milk for one dollar's worth of feed.

DEVICE KEEPS CHEESE MOIST

With This Protector Dairy Product May Be Kept Fresh for Considerable Length of Time.

A contrivance that will be found very useful in the cheese industry has been designed by a Michigan man. With this a cheese may be kept fresh and moist for a long time and not only save the dealer money, but give greater satisfaction to his customers. This device consists of an automatic shield, adapted to close over both sides of a wedge of cheese or to fit into the opening of a cut round cheese. It is fitted with a spring which causes it to keep always pressed over the cut surface of the cheese, thus preventing the air from reaching it and drying it out. The difference noticed between cheese bought at one store and that obtained at another is not always a matter of quality, but often a matter of method in preservation. The dealer who takes proper care of his goods will find that they keep fresh longer and the protector shown in the cut will give him invaluable help in this direction.

Cheese Keeps Longer.

Keep the Cow Clean.

A cow should be kept as clean or cleaner than an individual by being thoroughly bathed at least once or twice a week. Only the purest water should be given to her, for if allowed to drink from the impure stream of the pasture or from pools of water she may in this way infect the milk and thus carry the germs of disease.

The attendant should not only be a healthy individual free from disease of nose and throat, but should wear a white suit and should have hands thoroughly washed before milking. The udder of the cow should at every milking be thoroughly washed and all vessels intended to receive the milk should be thoroughly scoured. The stall where the cow is to be milked should be of cement finish and thoroughly cleaned before the milking process begins. After the milk is drawn it should immediately be put upon ice and the utensils kept open to prevent the development of tyrotoxicon.

DAIRY HERD IN THE WINTER

Close Study of Individual Cow Is Necessary if Results Are to Be Profitable.

(BY W. R. GILBERT.)

Not long ago I was looking at a herd of cattle used for the production of milk and butter in winter. It has the merit, at all events, of yielding a handsome profit to the owner, and differs in this way from many similar herds.

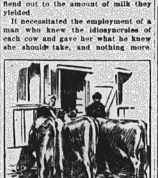
It was the more interesting, therefore, to look over the arrangement of a herd by which this feat is accomplished. There was, as the owner smilingly said, no secret to disclose.

He is a man who lives on the produce of his herd, and has made butter a much greater factor in his prosperity than is the case with his neighbors. What he insisted upon as regards feeding might be comprised in two words.

The first was that which may be described as individuality; in other words he paid no regard to the "rations" which many text-books give for the cow.

There was no such thing, he said, as the "average cow." Some eat more and some eat less, nor did their eating bear any proportion that he could find out to the amount of milk they yielded.

It necessitated the employment of a man who knew the idiosyncrasies of each cow and gave her what he knew she should take, and nothing more.



Good Milk Producers.

For feeding purposes he did not use sewerage grains, as he thought they had a prejudicial effect on the milk, but oil cake, with a fodder made by chafing straw and hay.

A quantity of the latter was placed in a rack just above each cow, so that she could nibble at it if not satisfied by her ordinary meal, and what remained in the rack was turned into fodder.

The place bears all the outward signs of prosperity. The buildings are by no means new, but they are kept in a state of sanitary cleanliness. Attention was given to the admission of plenty of fresh air, without draughts, and the farmer held that to keep a cow in health a certain amount of light is necessary for the winter months.

All liquid sewage was carried off by means of a drain. The dairy itself was a model of spotless cleanliness. This, of course, was a virtue in itself, but the farmer explained that he did not expect it to be its own reward. He had made a good circle of customers and was in the habit of charging them somewhat more than market prices for butter. In return, he insured that if would be of the very best quality, and of course made under conditions of the utmost cleanliness.

Not Yet Invented.

"I understand that he painted cobwebs on the ceiling so perfectly that the hired girl wore herself out trying to sweep them down." "There may have been such an artist, but there never was such a hired girl."

Just a Protest.

"If my songs are sung in heaven I will be all the fame I ask," said the lying singer of Buffalo news poet. "Yes, but kindly remember there's quite a bunch of other folks, pestered to death here on earth, who had hoped to find peace in heaven."

Prodigal and Miser.

The prodigal robs his heir; the miser robs himself.—Bruyere.
