NECESSITY FOR PROVIDING PIGS COMFORTABLE QUARTERS

Many Things of Vital Importance in Making Hog Business Entirely Profitable—Must Have Proper Shelter With Exercise.

Poland-China Sow and Litter of Pigs.

(By W. H. UNDERWOOD.)

In raising pigs there are several things, very essential, which are difficult to secure in the right degree in the winter time, and which sometimes make the winter litter rather costly.

Hogs are great lovers of warmth and they must have it for their economical growth. This has been fully demonstrated by the experiment stations in the different fattening trials. The cost of the grain in winter in instances was almost double with outside feeding as against with a warm shelter, all other things being as nearly equal as was possible.

Warmth is even more of a necessity to the suckling pig, and in fact fails that warmth and give the little fellow sufficient amount of exercise is where the difficulty comes in.

It is an easy matter to make the bed warm enough, but as soon as the pig leaves the nest for exercise out in the open, it becomes chilly and soon returns to the warm bed. Not taking exercise sufficient to keep it from becoming too fat, finally follow and death ensues. An abundance of exercise is necessary to avoid the disease in young pigs when they are getting all the milk and other foods they can eat.

In raising winter pigs there are six really important things to be taken into consideration: Warmth, exercise, good feed, ventilated quarters, sunshine and good blood.

In order to have these a warm and quite roomy building, which will make ventilation easy and allow the pigs to play without going out in the open is necessary. When the weather is sufficiently warm they should be out of doors as much as possible, provided when the sun shines. Plenty of sunshine is the greatest disinfectant and invigorator known.

Some years ago I had a couple of litters come early in the fall when the weather was very cold and for want of a better place to keep them I had the one in which they were farrowed, I penned up a little space in front of it and in this which were kept at night 30 head of cattle. The building was 16 feet by 40 feet, and when closed at night with the cattle in it was quite comfortable. This proved to be almost an ideal place for the pigs.

They were given fresh bedding every night and a fresh supply of bedding put in every day. Those pigs were exceedingly fast.

Under ordinary farm conditions it is a doubtful proposition to attempt to raise many winter pigs with good results, but under special conditions a few litters may be made profitable. The greatest obstacle is to provide somewhat warm space for the pigs to run about freely without browning chilled for lack of sufficient sunshine.

Scours and thumps often cause very great mortality among young pigs. The former is caused usually by over-feeding, by providing badly spoiled food, by an abrupt change of ration or by a change in feed that affects the milk of the dam. These latter is generally brought about by over-feeding and lack of exercise.

An illustration is shown herewith of a Poland-China sow with her litter of pigs. This breed put on fat rapidly, are docile and easily handled.

RAISING FUEL FOR HOUSEHOLD

Systematic Planting and Utilization of Forest Trees Is Branch of Agriculture's Work in Infancy.

(By R. B. BUCKHAM, Salem, Mass.)

A very small acreage of woodland, if properly managed, can be made to yield the necessary fuel for the household, from year to year, and yet maintain all average growth, or even increase in value.

The tree growth of the woodlot should be encouraged in every possible way. All dead wood should be conscientiously removed and added to the woodpile. It will serve well as substitute kindling, at least, and does away with one of the chief sources of disease among growing wood. It has been proven that a very large percentage of all the ailments of forest trees arises from the decaying dead-wood lying about.

Thinning correctly is a second requisite to making the woodlot most profitable. Where the standing growth is too close, all are compelled to strive for the lack of air and light. Hence some can well be removed, to the benefit of the remainder.

Where an area of any dimensions has been laid bare, it should be reseeded immediately. If the second growth does not start satisfactorily, it is as poor economy to allow parts of the woodlot to lie idle, as any other portion of the farm.

The increase of the more valuable trees should be encouraged, such as the oak, pine, hickory and ash. Some trees are of no value, save as stove wood, and are poor even at that. Yet, strange enough, at the start they are the most vigorous, and always selected at making the most rapid growth at the start, thus holding their own at the expense of their more valuable cousins. There are weeds among trees, as well as among plants.

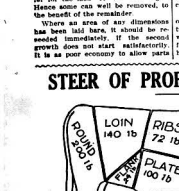
Forest tracts are indispensable to the welfare and best interests of the community. We cannot well do without them, because of their salubrious influence upon the climate, their conservation of the supply of moisture, and their value for purifying the atmosphere, to say nothing of their commercial value.

We must look to the farmer for the preserve of the necessary amount of forest area. Upon them will fall the burden of bearing this responsibility.

But that they will profit largely therefrom is well illustrated by the fact that the artificial timber belts which already exist in what was formerly the great, bare, wind-swept western plains, are already of incalculable value.

Systematic planting and cultivation of forest trees is a branch of agriculture yet in its infancy, but one which will prove exceedingly important before the history of this country shall have been written.

STEER OF PROFITABLE FORM



This steer weighed 1,300 pounds alive and 800 pounds dressed. This makes his dressing percentage 61. He is an example of the most profitable steer to feed, says Farm and Home. Note the broad head, straight, level back and deep flank.

LORIMER IS CLEARED

U. S. PROBERS DECIDE BRIBERY CHARGES ARE NOT PROVEN.

NO DISSENTING VOTE CAST

Report Goes to Full Committee and Later to the Upper House for Ratification.

Washington.—The subcommittee of the senate committee which investigating the charges of bribery in connection with the election of Senatorial William Lorimer of Illinois Monday decided unanimously that the charges made against any of the charges made.

The committee took up the evidence in its entirety at an executive session in contrast to the testimony, weighed the evidence and the arguments and took their conclusions of the facts that have been advanced in connection with the charges concerning Lorimer's election and decided there had been shown no foundation for the charges that bribery had entered into the case in connection with Mr. Lorimer's election.

The motion finally was offered to report to the full committee of the senate that the charges had not been proved. On this motion there was no dissenting vote in the committee. Following the action the subcommittee decided to report to the full committee at once, and the report will be sent to the senate within a short time.

The charge that Senator Lorimer had purchased his seat in the United States senate was first made publicly when Senator Lorimer's foes, Mr. White, a member of the Illinois legislature, made the charge in a speech on April 30, 1910. The names of Robert E. Wilson, Lee O'Neil Browne, H. Clay Pierce and Charles Saunders Link were mentioned as having been involved in the transaction of the senatorial trade. White confessed that he had been paid for his share in Lorimer vote by Lee O'Neil Browne, the minority leader in Springfield, and Senator Lorimer, Senator Lorimer had been elected by a combination of democrats and republicans.

Immediately after the publication of the story all the legislators involved were summoned before the state attorney's office in Chicago. Under a grilling examination lasting several days and under the strain of present-ment on perjury charges, confessions were made by the legislators, some accepting from Link and Beckemeyer. An indictment was secured at once in Cook county charging Lee O'Neil Browne with bribery, and another by Pierce and others charging Sangamon county carrying a similar charge against Senator Lorimer and Link.

Robert E. Wilson was also indicted for perjury in Sangamon. Cook of Decatur was indicted on a charge of perjury. Saving denied receiving any money and the money alleged to have been paid him for the Lorimer vote. The indictments against Beckemeyer, Wilson and Clark are still pending in the Cook and Sangamon courts.

Lee O'Neil Browne was tried twice in the criminal court of Cook county. The first time the jury disagreed and the second jury returned a verdict of not guilty.

JUSTICE WHITE NOW CHIEF

Louisiana Man is Confirmed as Head of the United States Supreme Court.

Washington—President Taft Monday sent to the senate the nomination of Associate Justice Edward Douglass White to be chief justice of the United States supreme court and the senate immediately confirmed it. Other nominations made by the following nominations

To be associate justices of the United States Supreme court, Judge Willis Van Devanter of Wyoming and Judge Joseph R. Lamar of Georgia.

To be judges of the new Court of Commerce:

Martin A. Knapp, now chairman of the interstate commerce commission, for a term of ten years.

Julius C. C. Archbald, now United States District judge for the middle and western districts of Pennsylvania.

William H. Hunt, now a judge of the Court of Customs Appeals, formerly United States District judge of the district of Montana, term of three years.

John Emmett Carland of South Dakota, term of two years.

Julian W. Mack, now judge of the appellate circuit court of the First Illinois district, term of one year.

To be members of the interstate commerce commission: Henry S. Drayton of Pennsylvania.

Charles C. McChord of Kentucky.

Take 26 Dead From Mine.

Vancouver, B. C.—Word came Monday from the scene of the accident at the mines of the Western Canada collieries at Bellevue, Alberta, say 26 bodies have been recovered. One of these is the body of Fred Anderson of Hosmer, who was with the first rescue party.

Congressman Cook Stricken.

Washington.—Representative Joel Cook of Pennsylvania suffered a stroke of apoplexy Monday and is at his home here in a serious condition.

THRESHING RETURNS FROM WESTERN CANADA.

They Report Larger Averages at Wheat and Oats Than Anticipated.

The returns from the grain fields of Western Canada are being had by the work of the Threshers, show much larger yields than were expected as the crop was thrashed. It is a little early yet to give an estimate of the dry-as a whole, but belated yields selected from various points throughout Manitoba, Saskatchewan and Alberta show that the farmers there are a rule have had reason to be thankful over the results. Excellent yields are reported from many portions of Manitoba and a large district of Saskatchewan has turned out well, while the central portion of Alberta is splendid. There will be shown at the land expposition at St. Louis a sample of the Marquis wheat—a new variety and one that appears to be well adapted to the soil and climate of Western Canada—that yielded 52 bushels to the acre. The exhibit and statement can be supported by affidavits from the growers. This wheat weighs 65 and being a hard variety will find a ready market at the highest prices obtainable for a first-class article. It is interesting to point out that a field of one hundred acres of this variety would give its producer 5,200 bushels. Sold at 50 cents a bushel would give him $46 an acre. Counting all the cost of farming on land at $50 an acre, getting the land ready for crop, seed sowing, harvesting and marketing, the entire cost of production would not exceed $8 an acre, leaving the farmer a net profit of $38 an acre. Is there any crop that would yield such a profit? Yes, and at the same labor and initial expense? Cotton would yield a bale to the acre, thereby with their great expense of cultivation, it would be run from one to various enemies of the bale cannot begin to do it. While what is considered a good average yield of oats is presented, there is no doubt that this year's experiment will be duplicated by others who care to follow his example. It has been said in the greatness of this wheat is but in its infancy, and wheat growing is still largely confined to land that is virgin soil, that is not yield as abundantly. Even with lady told me that she had eyeed over $100 in various remedies, and was cured with my line of Ill. Liniment. It is truly a wonderful cure for eczema and other itching troubles.

"You write of your hero as stealing home in the moonlight," said the editor.

"Yes," replied the author.

"Well, you ought to know better than that. Moonlight shines in the dark. If it was dark enough to be stealing home the game would have been called."

No matter how long your neck may be or how sore your throat, Dr. Wood's Norway Pine Syrup is surely and quickly relieves and cures it.—Ad.

There is no pleasure like that of being true with truth, in any game, without growing the worse for it.—Richens.

Dr. Pierce's Pellets, small, sugar-coated, easy to take as candy, regulate the entire stomach, liver and bowels and cure constipation.

We could all live on nothing if our friends would only do it.

Mr. Window's Soothing Syrup. For children teething, softens the gums, reduces inflammation, allays pain, cures wind colic. 25c a bottle.

It's a pity that more sermons are not as deep as they are long.

The Human Heart

The human heart is a wonderful double pump, through the action of which the blood stream is kept in motion and circulation. It is a muscle, and its work is very active. Remember this, that our health, will and mind the result of over-work, excitement, over blood any more than the engine can run second, by without oil." After many years of study in active practice of medicine, Dr. R. V. Pierce found that when the heart fails to do its work, the lungs, liver and bowels are congested, the blood becomes a mass of stagnant and corrupt matter, and the best correct diet. This is the cause of

Dr. Pierce's Golden Medical Discovery

Being made without alcohol, this "Medical Discovery" helps the stomach to assimilate the food, and thereby makes blood, flesh and muscle, instead of being attended with excessive illness weeks, usually is convalescence from various ailments, but the "Discovery" is not a cure-all, but a tonic-alterative.

Dr. Pierce's Common Sense Medical Adviser is sent on receipt of 31 one-cent stamps to pay the cost of mailing only, of 1,008 pages. Address Dr. R. V. Pierce, No. 663 Main Street, Buffalo, N. Y.

THE JOCULAR CLERK.

Customer (in grocery store)—Are some eggs on this counter fresh?

Clerk—Yes, ma'am.

Customer—How do you know they have been laid?

Clerk—I held them there myself, ma'am, 20 minutes ago.

What Resinol Accomplishes is Truly Wonderful.

I frequently have patients who are troubled with skin eruptions, and have very occasion to recommend Resinol, and in some cases the cures have seemed miraculous, and had I not seen them both before and after, would scarcely have believed them true. One lady told me that she had spent over $100 in various remedies, and was cured with my line of Ill. Liniment. It is truly a wonderful cure for eczema and other itching troubles.
