Some dairymen seem to enjoy an unaccountable prejudice against the detective work which can be done by detective work which can be done by cow-testing associations. Too many men are fooling with dairying. Let's get down to business, stop finding fault that our returns are not better and do something really worth while.

PLAN FOR MILKPAIL HOLDER

While Using This Device There is No Possibility of Cow Kicking Over the Pall.

From an exchange we get the plan for a milkpail holder as herewith it lustrated. With this device there is no longer any danger of the cow kick-ing the milkpail over. The holder consists of a crossbar in two sections, which are adjustable relatively to each other and can be made to fit any pail. When the bar is joined the beat

section encircles the rim of the pasi and does not get in the way of the streams of milk, while clamp and hooks hold the receptacle to it. The milkman, on mikmaid, holds the pail between his or her knees, the cross-ber bearing the weight, and is able to out keeping one eye on the near hoof.

HANDY CARRIER FOR SILAGE Bo Arranged That Feed May Be Raked Out Into Rack at Any Point Along Route.

My silo is built in one corner of the barn, and from here I have a track
