The quickest returns are from baby

Giving water at irregular times is injurious not only to chicks, but to old fowls.

Everybody knows that in July seather cows give a larger amount of nilk than in cold and wintry weather.

Build a good shed to shelter the nois; it is doubtful if you can make 3 1-3 per cent profit in any other ray.

There is a best tempera sch individual lot of cream, an be determined only by

There is no phase of the dairy busi-ness that needs more study or more careful management than does the careful management breeding of the cow.

As the time draws near for calving, the cow should be put into a comfort-able box stall, having plenty of bed-ding to keep her dry.

The open swill barrel standing by the kitchen door is a direct invita-tion to typhoid, diphtheria and like decases to enter the home.

When the fruit buds come very thick most people take it as a sign of a big yield, but when fruit grows too thickly it must necessarily be very small.

If the udder becomes hard a shows a tendency to garget, apply unsaited lard and give it a vigoroous rubbing: after which give the ewe a good dose of saits.

Cherry rot or brown rot affects all stone fruits, including peach, apricots, etc. It is by far the most serious and baffing of cherry diseases to the com-mercial cherry grower.

Never feed bay, or sweep or in any

reference will of man."

At the time of matters. If the rew partial of man. The time of matters and time of matter

Examine the ewe's udder.

Alfalfa cannot stand pasturing ret season, and never closely

Twenty tons of stable manure on half acre is about the right proporti-for the garden.

The way to get a good milk flow and hold it through the year is to give good cows good care.

It is estimated that more on fruit trees will be set o tana the present season

The way he carries his head and all more than anything else con-ibutes to style in the horse.

Examine the ewe's udder and teats carefully; see that both teats are open or you may get a caked udder.

or less shade, but nature will take care of that after intelligent pruning has been done. The milker should be clean in all respects. He should not use tobacco; he should wash and dry his hands just before milking.

The shropshire sheep have been placed rank one, the Hampshire rank two, the Southdown three. The Dor-set ranks fourth.

Location and demand govern to large extent the particular phase dairying practiced in the varie sections of the country.

Where cows are kept in the stalls much of the time, it is not unreason-able to say that the barn should be light enough for one to read in.

Don't neglect to grease the wagons that do the regular work about the farm. Hard oil is cheaper than horsefiesh, and a lot more hu-

Cantaloupes should not be grown near squash, pumpkin or cucumber vines, as the pollen will mix, giving the cantaloupes a flavor of the squash

Feed that is left in the manger ove night after being mussed over become sour and should be removed and the manger thoroughly cleaned before putting in fresh feed.

Let the new-born calf stay in the stall or pasture with its mother for several days, and she will let it fee at times and in amounts best suited to

Just how deeply the corn and other spring crops should be cultivated and just how long the cultivation should be continued is a matter upon which farmers differ widely in opinion.

No he says you smoke too

A Quaint Thought.
Miss Geraldine Farrar, scatted in
her deck chair on the George Washington, regarded a half-dozen urchins
playing on the sunny deck, and then
said with a pensive smile:
"I often wonder, considering what
charming things children are, where

"Congratulations!"
"For what!"
"I hear one of your exhibits to prize at the dog and poultry shawll, keep still about it. I tered a skye terrier and he took prize as a Mongolian hen!"
