

## Outlines Use of Land to Be Classified as Non-Depleting

Lake county farmers who are co-operating with the 1938 AAA program are having little difficulty in making good use of land not devoted to soil-depleting crops, according to farm adviser, H. C. Gilkerson.

As a rule they are anxious to use the diverted acres so as to accomplish as much soil improvement and conservation as possible, he explained. They are equally concerned in securing these adjustments and soil-building practices with a minimum of expense and in having them harmonize with the desired program for the farm.

In every case the first step being followed is to take an inventory of the conserving crops that are now found on the farm and that may be utilized in 1938. These may represent biennial and perennial legumes and grasses or catch crops such as sweet clover.

If in addition new seedlings need to be made, alfalfa, clovers or grasses may be seeded alone this spring where the land is not too sour and can be prepared properly. These seedlings may also be made with a nurse crop of small grain if the nurse crop is kept down sufficiently by pasturing to prevent grain formation and if it is not cut for hay.

In the event the land is too sour to grow clovers, and if grasses are not desired, the land may be seeded to soybeans which may be either cut for hay or plowed under as green manure. The land can also be used to Sudan grass or millet and the crop used for pasture or cut for hay.

## Acre Allotments for Corn Are Announced

County corn and general depleting crop allotments for Lake and the 101 other counties of the state, all of which are included in the commercial corn area, were established by the state committee by distributing the state acreage allotment among the counties on the basis of the acreage of corn planted during the 10 years 1928 to 1937, inclusive, with credit being given for the acreage diverted in applicable years under agricultural adjustment and conservation programs, and taking into account abnormal weather conditions and trends in acreage.

Lake county allotments have been apportioned to individuals. Lake county farms by county and township committees on the basis of tillable acreage, crop rotation types of soil and topography. Announcement of the corn acreage allotment and total soil-depleting allotment marks the first step in Lake county in carrying out the 1938 AAA program which aims to establish an over-normal granary to protect food supplies for consumers and provide more stable and adequate incomes for farmers. Farm Advisers Gilkerson and Paulkner said.

## Townsend Clubs of Lake County Plan Meeting April 24

The various Townsend clubs in Lake county are sponsoring a mass meeting which will be held next Sunday afternoon and evening, April 24 in the Central school, County and Clayton streets, Waukegan.

The afternoon session will start at 2 p. m. with W. E. Schuck, editor of the Townsend Weekly, as the

speaker. The evening session will start at 7:30 p. m. with John Maxwell, of Chicago as the speaker. Music will be furnished by a Townsend musical organization.

## REVIEWPOINTS

April 16, 1938

### Barrington Review:

Will you give space in your paper to this protest against a ruthless destruction of wild life on the land where the new ball park is to be built.

In the tall grass of these acres the meadowlarks, bob-linka, bob-whites, partridge, quail, and pheasant build their nests and raise their young. Each year we eagerly await these harbingers of spring with their beautiful songs and watch the age-old cycle of nest building, hatching of the young, their feeding and training. During unseasonable cold spells we put out a variety of food for the birds and endeavor to keep prowling cats and dogs away during nesting time.

When we saw this find in flames last night it was a major tragedy to us for we knew the birds had been nesting for some time. We thought someone had started a small grass fire and it had gotten beyond control so ran out to help but upon inquiry found that the fire department had started the fire to prepare the ground for the ball park. The fire was set in many places to burn quickly and as it watched the flames advance I saw many of our bird friends rise beside and blinded by the flames, smoke and heat, uttering startled cries.

If this action were contemplated by the village, why wasn't the grass burned in the early part of March before nesting time and if it had to be done now why wasn't it done in the daytime when the birds were off their nests and could see to fly?

As I walked over this burned area today, I saw many nests of the meadowlark with charred edges and it was a sad sight to watch these songsters flying over the blackened fields or setting in a low tree searching vainly for their nests.

I have never witnessed such wanton cruelty to our friends the song birds and I am voicing this protest in the hope that bird lovers of Barrington, individually or as organizations will protest effectively against such wanton or thoughtless destruction of our wild life.

Yours sincerely,  
Nina Gunderson.

## SEEDS

Alfalfa Clovers  
Grasses Millets  
Soy Beans Pasture Mixture

This year's early demand has already reduced many dealers' stocks of better grade seeds, and while prices for these remaining first grade supplies are still very reasonable, as soon as they are cleaned up, the second grades will probably tend to go up over their present level.  
It is advisable for every farmer to buy what he will need this spring NOW while prices are reasonable on better grade seeds.
