MARCH 3, 1938

Strictly of quarantine rules and regulations was charged with being responsible for the wide-spread attack. Council members of the Arlington Heights board found the situation sufficiently grave to issue a blanket order to provide medical care for children with infectious diseases at the expense of the village of Arlington Heights, upon proper application to the health department.

DID YOU KNOW that Public Service Supplies Electric Power to 97 Per Cent of All Industries Located in the 6000 Square Mile Area It Serves?

4 O'CLOCK WHISTLE But not for the Power Supply!

When the night force punches the clock, and the day men leave, hardly anyone ever considers that the silent operating force—power—is still on the job.

For purchased power stays on the job 365 days out of the year—unmindful of changing shifts. When it's wanted, it's there.

Consider the security that this means to management.

Production plans do not have to be thrown into havoc because power-making equipment has come to the overhaul stage, or hasn't the capacity to meet changing requirements. Plants operating on power purchased from the lines of Public Service of Northern Illinois are assured of dependable service so important to production and delivery of orders that must be finished on time.

Sound business practice dictates that power costs be considered not entirely by price per kwh., but also by that factor called dependability. For on dependability of the power supply, factory production depends.

Purchased power is low cost power. Its cost curve to the user has not followed the curves of fuels and fuel taxes. Its cost curve has consistently dropped since the war.
