### SCIENCE AND TUBERCULOSIS

de of Fighting This Most Insidi-Sest Plan Is to Keep Body in Pi

all the old-time vigor.

The Price of Indoor Life.
Within the past twenty years there has been a steady development of constance of the property of all titude or special climatic advantages, has demonstrated the immense value of the out-door life as a curative means. This not surprising, since has in sururally an out-prising, since has in sururally an out-prising since has not civilized human beings live is wholly artificial. We pay an enormous price for the luxury of living in houses. Not only pulmonary tuber-culosis, but a 'large number of other culosis, but a 'large number of other chronic maindles are the natural out-growth of the lowered vital resistance promit manages are the natural out-frowth of the lowered vital resistance which results from the conditions im-lowed by modern civilized life. We have become too much civilized.

We have become too much civilized.
A mild return to savager; is the one
thing needful at the present time. In
cold weather we can not live out of
doors, but we can take care to supply
our living rooms, and especially our
bed-cooned the a bundant supply or
bed-cooned the abundant supply of
least remedy for morning beadeches,
which usually mean air-poisoning.

Appetite Juice.

The taking of food into the mouth is a signal to all the digestive organs to prepare for work. Even the sight and odor of food may cause an outflow of salliva, and at the same time the gastric juice pours into the stomastic.

how or saive, and at the same time the gastric juice pours into the stomman and the same and the

stances through the successive steps of the digestive process.

The thorough chewing of the food produces an abundance of what Paw-low calls "Appetite Juice," wifich is the best and most important juice formed by the stomach. Hence food must be well reliabed, and eaten with eighted attention to very thorough

Vital Activity in Cold Weather.
The vital fires burn brighter in cold eather. The whole tide of life ores with greater activity. The proses of digestion is quickened because

cess of digestion is quickened because the process of ordation is increased. The liver requires oxygen for mak-ing bile and performing all its varied functions, and the oxygen we breathe in cold air, improves the function of more work than before. The muscles, also, depend for their

more work than before.

The muscles, also, depend for their activity upon oxygen. In an excess of carbonic acid gas the muscles are applyraisted, and so one feels depressed in warm weather.

A person does not get out of breath so easily in cold air as is warm. The woodchopper can swing his axè with more energy on a cold day. Cold air sids in the elimination of the polonomatters which are all the time forming within the body.

When oxygen is not plentiful

forming within the body.

When oxygen is not plentiful
enough to make the vital fires burn
sufficiently to consume the fuel and
waste of the body, then much of the
waste material is left behind in the
form of imperfectly burned substances, which may be called cinders

The "Cold Air Gure."

Cold air gurifies the blood, energizes the heart, puts new vim into the numeles, helps the stomach, wakes up the lives, lifts the whole being to a higher plane of life.

The most in the world is Davos, a winterescort in the Svins Alps, near the Engage and the semantic consumption resort in the Svins Alps, near the Engage and the semantic consumption resort in the Svins Alps, near the Engage and the semantic consumption resort in the Svins Alps, near the Engage and the semantic consumption resort in the world resort to bave to take the "cold air cure."

Cold air cures (there is no doubt about ii), when accompanied by wise and skillful management, and careful regulation of diet. In the summer season, the semantic conditions are all the semantic conditions are all the semantic conditions. The semantic semantic conditions. The semantic semantic conditions. The semantic semantic conditions. The dense air, containing from one-eighth to one-fourth more oxygen than indicate the containing from one-eighth to one-fourth incre oxygen than indicate the containing from one-eighth to one-fourth incre oxygen than indicate the containing from one-eighth to one-fourth incre oxygen than indicate the containing from one-eighth to one-fourth incre oxygen than indicate the containing from one-eighth to one-fourth incre oxygen than indicate the check heaves, the heart quickens, the lungs expand, and the containing from one-eighth to one-fourth incre oxygen than indicate the check heaves, the heart quickens, the lungs expand, and the checken from the following the containing from one-eighth to one-fourth incre oxygen than indicate the check haves, the heart quickens, the lungs expand, and the checken from the following the containing from one-eighth to one-fourth incre oxygen than indicate the check haves. In the heart way to the checken from the checken from the checken from the checken from the checken from

Don't be straid of cold sir. There's life and health out of door.

Alcohol vs. Strength.

The laborer, the traveler, and the roldier use alcohol under the delusion that it, produces strength. When fatigued, the laborer takes a giass of a control of the strength, he was the strength, he were, is wholly a matter of imagination.

The use of alcohol makes a man feel stronger—makes him believe that he can do more work, endure more fatigue and hardship, and withstand a greater degree of cold than he could is made, it soon becomes apparent that the ability is lacking. Numerous experiments have shown that alcohol decreases muscular strength. Says Dr. Brunton, "The smallest quantity takes somewhat from the strength of the musicles." Says Dr. Edmunds, of London, "A stimulant is that which gets strength out of a man." London, "A stimulant is that which gets strength out of a man." London, "A stimulant is that which gets strength out of a man." The combined strength of all the different groups of muscles in the body was found, in the case of a healthy young man to be 4,851 pounds. The young man was then given two ones of brandy, and the test was repeated was increased. In fast, it was found to be only 3,355 pounds, a loss of more than one-third. A notable diminution is strength was still present ten hours ofter the administration of the brandy.

uffered Agony and Had to Wea Bandages All the Time—Another Cure by Cuticura.

Another cure by Cuticurs is told of by Mrs. Caroline Cable, of Wannesa, Wis., in the following grateful letter: "My husband suffered agony sail rheum on his hands, and I had to keep them bandaged all the time. We tried everything we could get, but nothing helped him until he used Cuticura. One set of Cuticurs Song, Onitment, and Pills cured him entirely, and his Hands have been as smooth as possible ever since. I do hope this letter will be the means of helping some other sufferen."

Flash of Humor on Senate.

While presiding over the grave de liberations of the United States sen ate Mr. Fryo of Maine occasionally allows bimself to induje in a flash of humor. One day last week an unimportant amendment was offered to a measure under condideration. On the question being put a single "Texame from the republican side, followed by a lone "Nay" from the opposition. "The yea has it," and Senator Frye gravely.

As the world advances in civilization more products of the dairy cow will be used. The demand for cream is greatly on the increase in our western of the satisfaction of the satisfactio

to our dairy herds.

Foreign Cheeses Made in America. The making of foreign cheeses in America has greatly developed during the last few years. When a man goes to the market and saks for a cheese with a foreign name there is no certainty that he will get a cheese that is made on the other side of the Atlantic ocean. In the main these cheeses are as good as those made concludes are as good as those made not, however, identical. Thus at a Wisconsin convention attended by Major Alvord about a year ago, a man in the audience declared that a certain brand of cheese with a foreign name was exactly the same whether made in Wisconsin or in Foros. Major Alvord declared that this could not be, because the cheese made in of the country of the

Cook Cousty, Ill. Julia Smith.

A Good Example.

The protection of the milk supplies of cities naturally comes under the control of the board of health, but few of the imen composing city boards of health take the trouble to inform themselves of the real conditions aurounding the production of clean and dirty milk. The example of one Canadian city is worth following. The city of Ottawa sent its milk impectors to the Ottawa sent its milk impectors its control of the production and a course in the ottawa sent its milk impectors its certainly a step in the right direction. An impector so, is forwed its worth more than half a donen men who do not know what are the best ways of handling this important food product.
