Somersaulting Aeroplane.

Somerasulting Aeroplane.

Stage equipment, says the Popular Mechanics. At one and of a girder phroded to a standard about 12 feet high, is a miniature saropiane so constructed as to be able to turn somerasults. The 3-foot propeller of the machine, driven by a five horsepower lwb-cylinder engine, sends the aeroplane around on the end of the girder, the other end of which is provided with a counterpoise. The aerobat works the elevating plane with his right hand, making the machine turn somerasults.
