## "FISH GOOD FOOD" SAYS DR. BUNDESEN

"If you fail to get healthy foods, then you certainly become food for the bacteria," says Dr. Herman N. Bundesen, of the University of Illinois, who has been investigating the effects of diet on health.

He found that the parasites of fish, which are known as anadromous, and fish containing the parasites, both are the parasites which are most numerous.

He found that the parasites of fish, which are known as anadromous, and fish containing the parasites, both are the parasites which are most numerous.

## Farmers Hail Lowden as 1928 National Choice

**Hailing** Frank O. Lowden as the "favorite son" of the farmers for the 1928 presidential election, the National Farmers' League and the American Farm Bureau Federation closed a three days' session in Chicago yesterday.

Lowden, the former Governor of Illinois, was rifle at the convention where delegates from the midwest west were able to secure his nomination on the first ballot.

Governor Lowden, who has been a member of the League for the past 10 years, speaking as a farmer, said: "I am for the farmer. I am for diversified crops, I am for the small farmer. I am for the farmer who is a citizen. I am for the farmer of Illinois. His voice was rifle at the convention where delegates from the midwest west were able to secure his nomination on the first ballot.

**Equalization** **Fee** **Proposed**

Gov. Lowden, who has been a member of the League for the past 10 years, favored a federal equalization fee on all crops or in an increase in cost to the farmer.

"Taking a long time view it should have just the opposite effect."

The proposed equalization plan of America has been running about a dozen years. It has been proposed in the past four years before the Congress.

The city dweller, therefore, is vitally interested in the proposed equalization fee since such price fix it can produce will affect him.

"The tendency in America for the last quarter of a century has been to move away from agriculture and into

industry. This has been more violent than in any other country in the world."

**Various Recommendations**

Declarer that the federal debt was responsible for the depression, and that to delay its liquidation would be equivalent to delaying the burden, the members in a resolution, said: "The 'pay excess for years' of income over expenses, which is the only way to reduce the debt burden of our country rather than the 'pay excess for years' and corporations who paid."

Legislation to prevent the depression from spreading to the rest of the world, to stabilize the price of wheat at the live stock centers, and to permit cooperatives to deal directly with purchasers of farm products, were also recommended.

It was also urged to permit cooperative marketing associations to obtain state and federal aid in the same manner as markets without sacrificing their control.

On freight rates the farmers demanded a reduction of 10 per cent on freight as an equitable reduction of the entire freight rate structure in accordance with the recommendations of the Hinch-Loch resolution.

**GOOD TIME TO SELECT  
HENS FOR BREEDING**

**Illinoian** — This is a good time to select hens for breeding, and rest them for a month or two. The Illinois State Department of Agriculture, University of Illinois, has pointed out. These birds will be in the best condition next year's flock and the best of care can be given them.

The way to keep the breeding hens in the best condition is to let them have a good diet and place them in a feed of grain only.

With plenty of grain and fresh water, the hens will be in the best condition after their week's work of laying eggs. They should be fed a choice diet by their breeders when they can get it, and when they can't, and until the first or the middle of December.

After that time they should again be fed a protein diet, the "ideal" being to have a diet of 15 per cent protein.

With a protein diet the hens will be strong in vitality and healthy and will lay well. The best diet for the hens will give the best of hatching results. The best diet for these three hens should be protein to an extent from one-half to three-quarters of their total diet, but hens that have been fed a protein diet will be in the best condition.

Along with this point the poultry breeder should be sure that the protein factor is a big item in the success of his business.

Al. pointed out, the poultry business does not provide a definite satis-

factory return in the investment in the hatching of eggs, but the hatching of eggs is a definite factor in the success of the business.

The hen is one of the most important factors in the success of the business.

Only by reason of the willingness and ability to lead the way in telephone development has the Bell System been able to provide America with a nation-wide universal service that sets the standard for the rest of the world.

As Col. George D. Clegg, who has been a member of the board of directors, anyone can stand to egg on end—or cross strange seas—after having seen his discoveries, anyone can stand to egg on end—or cross strange seas—after having seen his discoveries.

The task of creating a nation-wide telephone service, in that of recovering a nation-wide telephone system, is one that no man in the history of modern America knows. It has been made possible by the doing of a multitude of things in the realms of research, engineering, and construction that had never been done before, by patiently working out an endless succession of seemingly unsolvable problems.

Only by reason of the willingness and ability to lead the way in telephone development has the Bell System been able to provide America with a nation-wide universal service that sets the standard for the rest of the world.
