engine to the Ford line for 1937 brings you a new low price and gives you a choice of two V-type 8-cylinder en-gines. 85 horsepower for maximum performance. 60 horsepower for maxi-

ower V-8 engine wa The 60-horsepower V-8 engine was orderiginally developed for use in England and France, where fuel costs are high. It has been proven there for two years with brilliant success.

Now, brought to America, it

creates an entirely new standard of

modern motoring economy!

The "60" engine, available in five body types, is built in exactly the same body size and wheelbase — to the same output advanced design — with the same comport and convenience as the "85." And it delivers V-8 smoothness at speeds up to 70 miles an hour.

Two engine sizes—but only one car and one purpose—to give you more miles and more satisfaction for your money in 1937.
