

"Hurricane" Is Week-End Feature Coming to Catlow

"The Bad Man of Brimstone" Begins Three Day Run Wednesday

A Park Avenue swell invades Greenwich village with a chip on her shoulder, and comes out with a ring on her finger in "Wise Girl," a comedy-drama co-starring Miriam Hopkins and Ray Milland, coming to the Catlow Saturday.

Miss Hopkins, as a wealthy society girl, goes to live in New York's art colony in an effort to wrest custody of two orphaned children away from a struggling artist, but falls in love with him.

"Danger Patrol," with Sally Eilers, John Beal and Harvey Carey, plays the double feature bill with "Wise Girl."

Acting in a South Sea island picture is no job for a "softie." Dorothy Lamour and Jon Hall will testify.

Even before the big climax which gives it name to Samuel Goldwyn's production of "The Hurricane," was reached, Dorothy and Jon, who are playing the native hero and heroine of the film, showing at the Catlow Sunday and Monday, took plenty of physical punishment.

Walking barefoot over pebbly beaches and jagged rocks, being drenched by cold water from dawn till dusk and having 60 mile an hour gales whipped into their faces by batteries of wind machines were just their routine hardships. Each day brought some special ordeal, such as a lung-torturing underwater swim into a subterranean cavern or a fall from a coconut palm tree.

How a big city was cleared of its racketeers by honest investigators and honest prosecutors is the theme of "Missing Witnesses," a melodrama featuring John Lisle, Dick Purcell and Jean Dale, scheduled for Tuesday at the Catlow.

Written by a couple of police reporters who know their underworld, Don Ryan and Kenneth "Camet"—the picture is said to be an authentic exposition of the terrifying process of getting witnesses out of the way who might testify damagingly against desperate crooks.

Dick Foran, "the singing cowboy," is starred in "Empty Holes," playing the double feature bill with "Missing Witnesses" on Tuesday.

Heralded as an impressive epic of the West, "The Bad Man of Brimstone," starring Wallace Beery, is coming to the Catlow theatre Wednesday for three days, as a benefit for the Barrington Baseball club. Portraying in graphic detail the manner in which law and order came to the lawless town of Brimstone, the new picture production offers Beery a picturesque characterization.

Filmed on an epic scale against the background of the West's wide National Forest country, "The Bad Man of Brimstone" and its hard-riding, hard-shooting crew of top-notch players offers comedy, romance and gripping drama.

Problem of Truth
The problem of truth is to discover the nature of the agreement between the things of the mind, our ideas, and the reality of which ideas are the knowledge. We call the agreement truth.

Senior Class Wins Inter-Class Cage Tournament Friday

The senior class basketball team won the Barrington high school inter-class championship by defeating the junior class five Friday, 24 to 20. The sophomore class swamped the freshmen, 53 to 16.

In the preliminary round Wednesday afternoon the seniors also trounced the freshmen, 31 to 8, and juniors emerged winners over the sophomores in a sudden death overtime game, 22 to 20. Two free throws by Earl Grabenkort proved to be the winning margin in the last contest.

Ernie Rice was high point man in the most garnering 25 markers. Kenny Cline was second with 26 points and Jack Gruening third with 16.

Following are the box scores for the final round:

Hell's Half Acre

Hell's Half Acre is located forty-five miles west of Casper, Wyo., and is one of the most remarkable spectacles in that section. The walls of the canyon are of a soft sedimentary rock.

Spraying Not Effective for All Tree Germs, Botany Writer States

Spraying shade trees to prevent disease attack proves successful only when used with discrimination, according to a statement just issued by Dr. L. R. Tehon, authority on tree diseases and head of the section of applied botany of the Illinois Natural History survey at Urbana.

"For disease control alone," says Dr. Tehon, "the value of shade tree spraying is often overrated. Sprays have been developed mainly for use in orchards, to control diseases that threaten the crop rather than the tree. But with shade trees it is the tree that is valuable, and the problem in disease control is to preserve the tree and not the crop."

"When disease similar to those injurious to fruit trees threaten shade trees, spraying is both advisable and beneficial. But spraying for other shade tree diseases is usually futile and represents a waste of time and money. New methods for treating diseased shade trees are needed that will bring about the cure of the tree itself. These are being developed."

Trees especially beset by spraying, according to Dr. Tehon, are American elm, sycamore and white oaks. Elm leaves are subject to infection by an anthracnose fungus, readily preventable by Bordeaux or sulphur sprays. But elms need to be sprayed for this disease only when they are definitely threatened with defoliation or loss of leaves. Sycamore and white oaks suffer severely in Illinois from leaf and twig blight. Great damage is done by this disease in wet springs, and the disease recurs year after year. Spraying these trees annually in spring is necessary to control this disease.

Miraculous results, Dr. Tehon warns, must not be expected from one spraying, because sprays

merely cover leaf surfaces with protective poisoning. This washes off in rainy weather, leaving the tree unprotected. New leaves put out after a spray has been applied are also unprotected. It is often necessary to spray trees several times during a growing season in order to maintain the needed protection.

"Sprays are not effective for wilt diseases of maples and for similar diseases of many other trees," Dr. Tehon states, "because these diseases are caused by parasites that work deep in the wood of the trunk and branches. The presence of these diseases is not suspected until it is too late for sprays to prevent infection. In such cases, special feeding and watering may help trees to survive."

"Both trees and fungal parasites are living things," Dr. Tehon explains, "and are composed fundamentally of protoplasm. A spray must be strong enough to kill parasite protoplasm but weak enough to avoid injury to tree protoplasm. The difference between the protoplasm of trees and that of parasites is probably very slight, and the margin between effective disease prevention and actual injury to trees by sprays is equally small. If a spray is not prepared or applied properly, severe damage may be done to the tree, or the spray may not be effective in protecting the tree. Preparation and use of sprays demand training and experience and are jobs for the tree surgeon or tree expert."

Trees that are sprayed regularly often seem to grow better and appear healthier than unsprayed trees because, in Dr. Tehon's opinion, sprays control numerous minor pests and diseases to which the tree would ordinarily be subjected.
